

1. A carton adapted for storing and displaying stacked sheet material, the carton comprising a one-piece blank adapted to be folded in a manner resulting in a carton having

(a) a bottom panel with a first edge and a second edge,

(b) a first side wall and a second side wall, the bottom panel being joined to the first side wall along the first edge, the bottom panel being joined to the second side wall along the second edge, the first side wall comprising a first outer side wall and a first inner side wall, the first outer side wall being secured to the first inner side wall;

(c) a first flap extending from the first inner side wall over at least a portion of the bottom panel, the first flap being secured to the bottom panel; and

(d) a first arch located on the first inner side wall, the first arch comprising a perforation line.

2. The carton of claim 1 in which a second flap extends from the second side wall over at least a portion of the bottom panel, the second flap being secured to the bottom panel.

4. The carton of claim 1 in which the first flap is secured to the bottom panel by an adhesive.

5. The carton of claim 1 in which at least one tab is provided near the junction of the first flap with the first inner side wall.

8. The carton of claim 1 in which the carton selectively comprises:

(i) a relaxed position in which at least one of the first and second side walls are canted towards each other, and

(ii) a tensioned position in which sheet material is positioned between the first and second side walls is held in place in part by pressure applied from the first or second side wall.

10. A carton adapted for storing and displaying stacked sheet material, the carton comprising a one-piece blank adapted to be folded in a manner resulting in a carton having

(a) a bottom panel with a first edge and a second edge,

(b) a first side wall and a second side wall, the bottom panel being joined to the first side wall along the first edge, and the bottom panel being joined to the second side wall along the second edge, the first side wall comprising a first outer side wall and a first

inner side wall, the second side wall comprising a second outer side wall and a second inner side wall; and

(c) a first flap and a second flap extending from the first inner side wall and second inner side wall respectively, the first and second flaps extending from each respective side wall and over the bottom panel, the first and second flaps being affixed to the bottom panel, wherein the first and second side walls are erected such that the first outer side wall is adjacent to the first inner side wall and the second outer side wall is adjacent to the second inner side wall.

12. The carton of claim 11 in which the carton selectively comprises:

(i) a relaxed position in which at least one of the first and second side walls are canted towards each other, and

(ii) a tensioned position in which sheet material is positioned between the first and second side walls, said sheet material being held in place in part by pressure from the first or second side wall upon the sheet material.

19. The carton of claim 10 in which the first outer side wall is secured to the first inner side wall, and the second outer side wall is secured to the second inner side wall.

21. A sheet material dispenser, comprising:

(a) a bottom panel having a first edge and a second edge,

(b) a first side wall and a second side wall, the bottom panel being joined to the first side wall at the first edge and the second side wall at the second edge, the first side wall comprising a first outer side wall and a first inner side wall, the second side wall comprising a second outer side wall and a second inner side wall;

(c) a first flap and a second flap extending from the first inner side wall and second inner side wall respectively, the first and second flaps extending from each respective side wall and over the bottom panel, the first and second flaps being affixed to the bottom panel, wherein the first and second side walls are erected such that the first outer side wall is adjacent to the first inner side wall and the second outer side wall is adjacent to the second inner side wall; and

(d) first and second tabs positioned along the first and second edges of the bottom panel, respectively, the tabs being adapted to assist in maintaining erect the first and

second side walls, thereby facilitating containment of stacked sheet material for transport or display.

23. A system for transporting and displaying sheet material in a three-sided carton, the system comprising:

- (a) a bottom panel having a first edge and a second edge,
- (b) a first side wall and a second side wall, the bottom panel being joined to the first side wall at the first edge and the second side wall at the second edge, the first and second side walls being held generally erect;
- (c) sheet material stacked upon the bottom panel, said sheet material being positioned between the first side wall and the second side wall; and
- (d) a removable outer protective wrap configured to encase and surround the carton.

30. The system of claim 23 in which the carton selectively comprises:

- (i) a relaxed position in which at least one of the first and second side walls are canted towards each other, and
- (ii) a tensioned position in which sheet material is positioned between the first and second side walls, said sheet material being held in place in part by pressure from the first or second side wall upon the sheet material.

Please add the following new claims:

31. (New) The carton of claim 2, wherein the second side wall comprises a second outer side wall and a second inner side wall, the second outer side wall being secured to the second inner side wall.

32. (New) The carton of claim 31, further comprising a second arch located on the second inner side wall, the second arch comprising a perforation line.

33. (New) The carton of claim 1, wherein the first arch defines a dividing line between a portion of the first outer side wall and the first inner side wall which are secured to each other and a portion of the first outer side wall and the first inner side wall which are not secured to each other.

34. (New) The carton of claim 33, wherein the first arch includes a first end and a second end, the first and second ends being located adjacent to an intersection of the first flap and the first inner side wall.
